Have you seen this shape before?

Normal distribution

- Oftentimes data is described as being “normal” (in the statistical sense). But what does that mean?
- Let's start by discussing the frequency with which various events, whether natural or man-made, occur
 - Natural: human height, body temperatures, blood pressure etc.
 - Man-made: Financial data, sales etc.
- For these measures, the mean tends to be very frequent while measures away from the mean are less frequent
- Let's take a look at the normal distribution to learn more about its properties

Z distribution

$$\mu = 0$$

$$\sigma = 1$$

The Standard Normal Curve

50%
0.5

Cumulative probability

$$-\infty \leq Z \leq 0 = 0.5$$

Upper bound of the cumulative distribution

Function Arguments

NORM.DIST

X	0	=	0
Mean	0	=	0
Standard_dev	1	=	1
Cumulative	TRUE	=	TRUE

Returns the normal distribution for the specified mean and standard deviation.

Cumulative is a logical value: for the cumulative distribution function, use TRUE; for the probability density function, use FALSE.

Formula result = 0.5

0.1587

Cumulative probability

$$-\infty \leq Z \leq -1 = 0.1587$$

Upper bound of the cumulative distribution

Function Arguments

NORM.DIST

X	-1	=	-1
Mean	0	=	0
Standard_dev	1	=	1
Cumulative	TRUE	=	TRUE

= 0.158655254

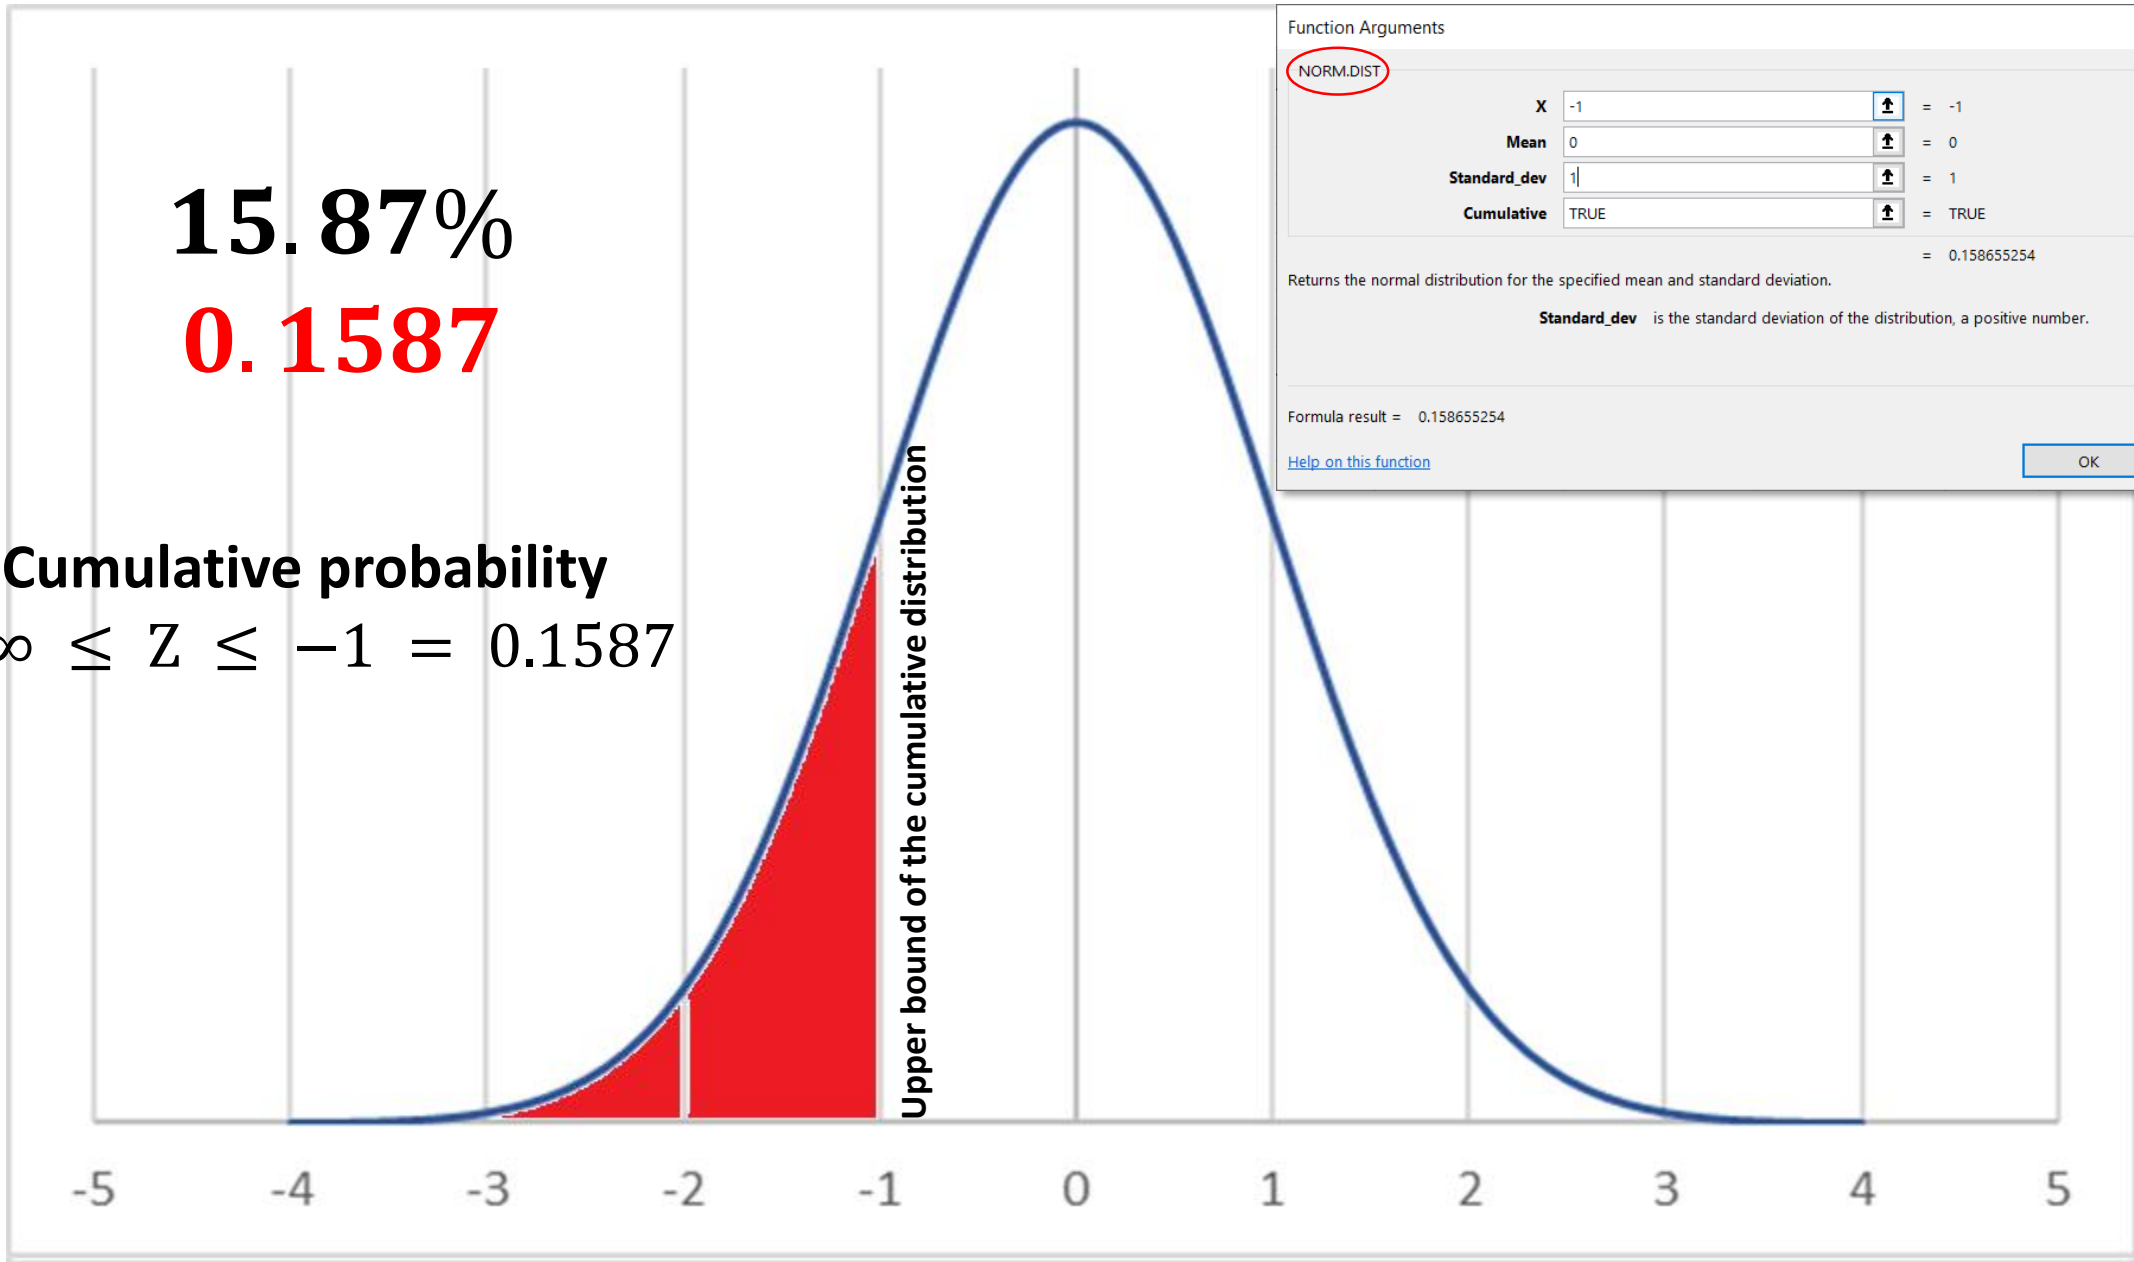

Returns the normal distribution for the specified mean and standard deviation.

Standard_dev is the standard deviation of the distribution, a positive number.

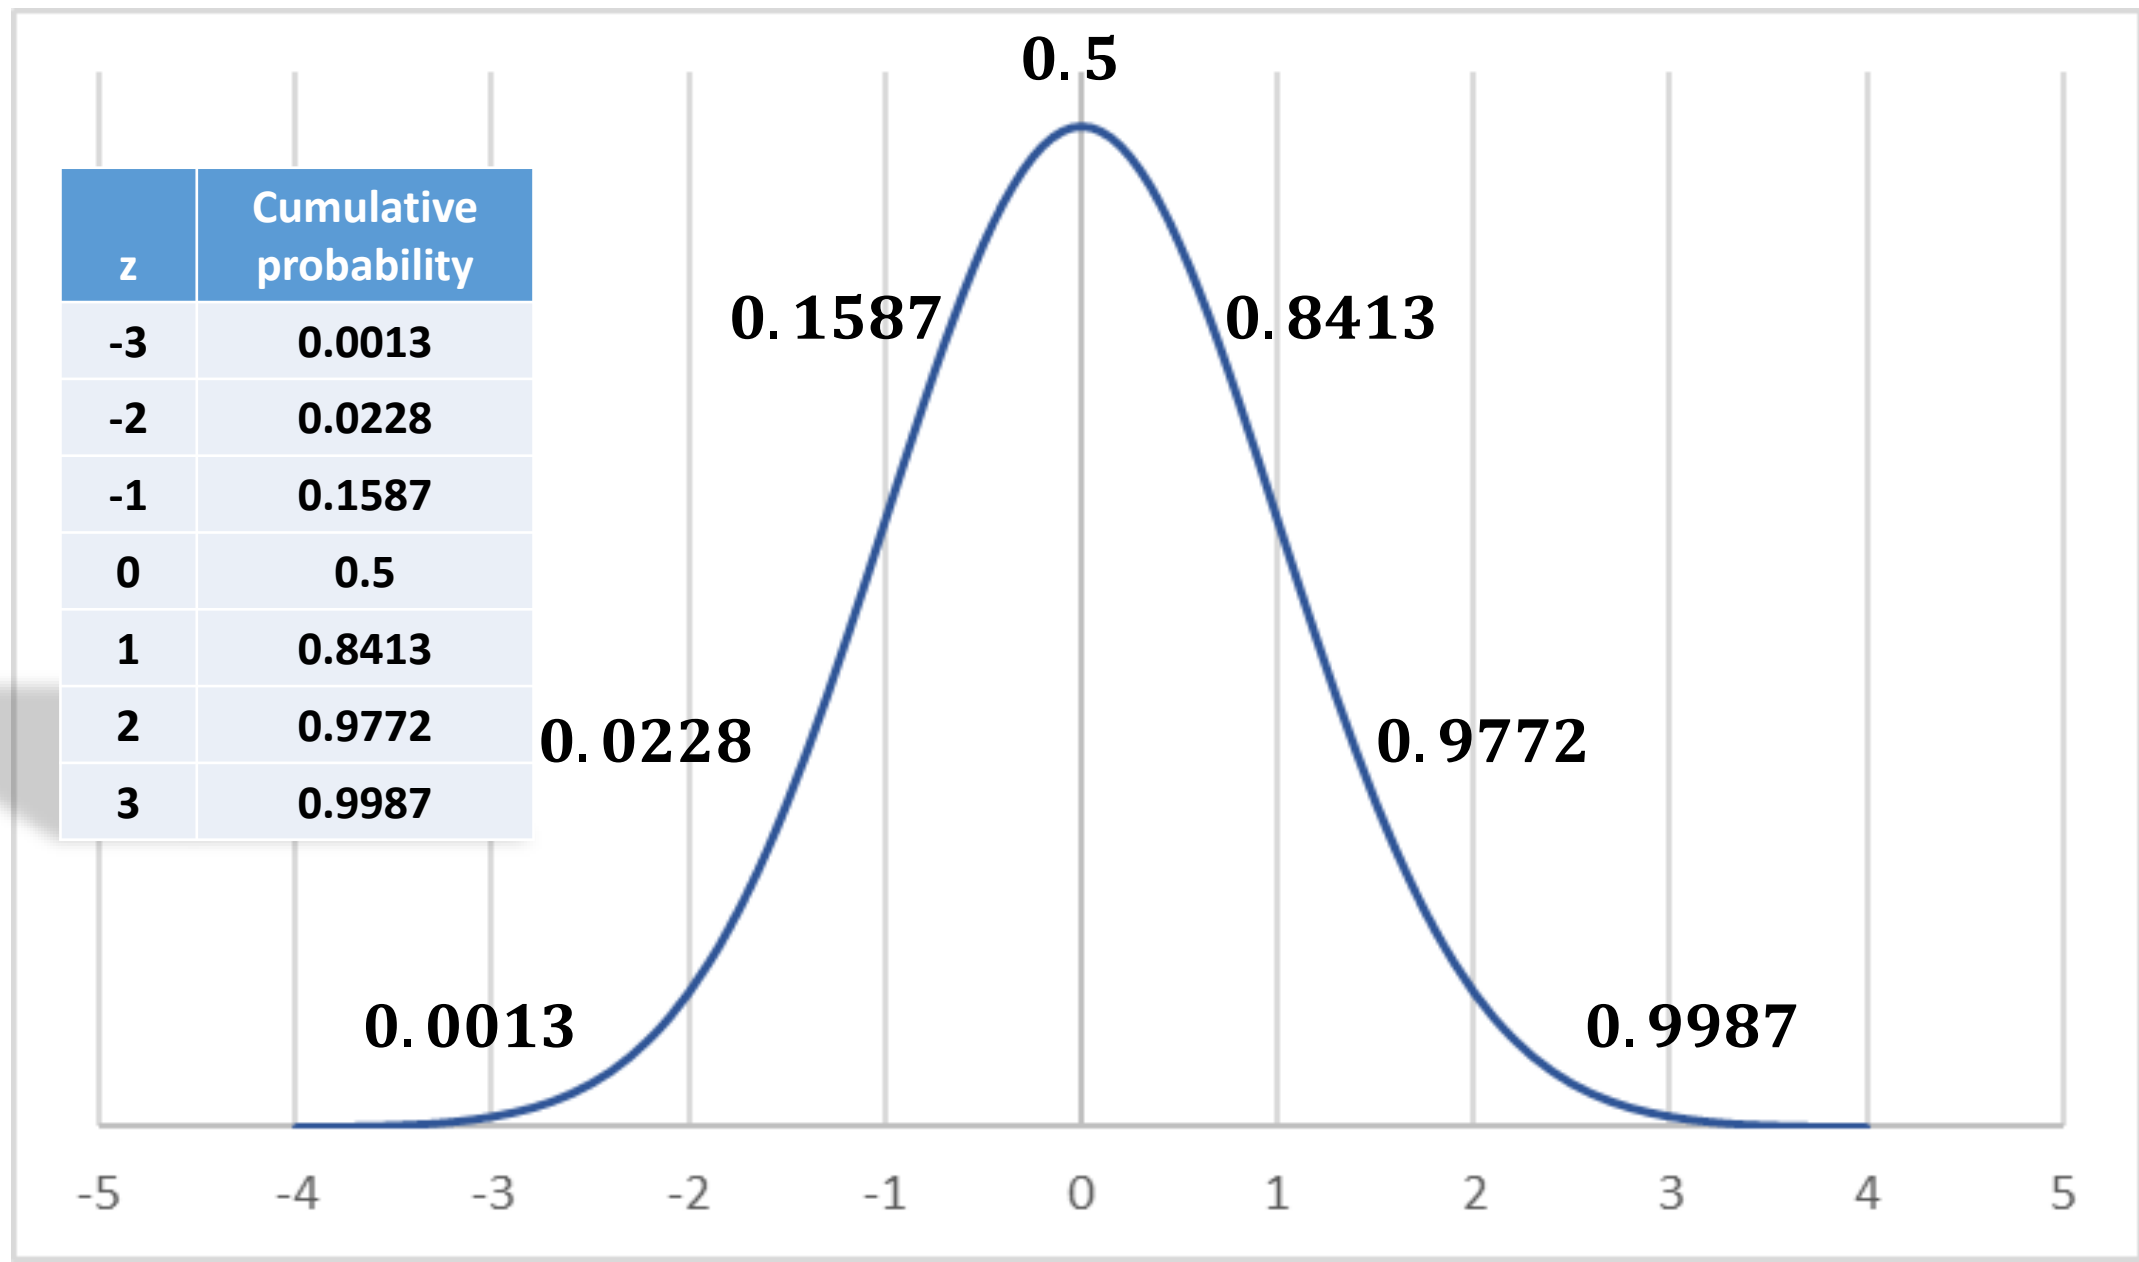

Formula result = 0.158655254
